Codeclaw Softkey Hook Creator

Started by jock, Nov 16 2009 12:32 AM

CodeClaw Softkey Hook Creator

Requirements: .NET Framework 2.0 or newer
Version: 1.0
Author: Jock (CodeClaw)

Features:
+ Reading Midlet info from JAR
+ Compressing TAR archives (*.itm)
+ Save anywhere
+ Add your own internal operations in the operations.txt
+ View xml before save

How to:

A2
+ Create a *.itm with CodeClaw Softkey Hook Creator
+ Create a empty textdocument and name it customize_upgrade.xml
+ Upload your xml and itm to **tpa/preset/custom** with A2Uploader or Phone Explorer by cruiser
+ Start phone and enjoy ;)

A1
+ Create a *.itm with CodeClaw Softkey Hook Creator
+ Extract the itm with etc WinRAR or TugZip.
+ Create a folder in **tpa/preset/system/custmenu** named same as the itm you made (etc. RIGHT_SOFTKEY_HOOK)
+ Upload the content you extracted from your itm file to this newly made folder.
+ Delete the file **cust_menu_done_unpacking.dat** in **tpa/preset/system/custmenu**
+ Reboot phone and you're done ;)

Softkey PNG Resizer

Information:
This is a small utility for the lazy ones (like me), lets say you have a png image with 56x56 creating a hook with it would end up with a to big image as the softkey height is max 28px, this utility will resize the png to height of 28px and reduce width at same time :)

How to:
+ Drag png to the application icon
+ new png appears in old png's folder
