Customize.xml Analyse and Comments

Started by rafik23, Jul 25 2007 11:23 AM

After flashin FS we need to finalize the phone

customize.xml found in CDA zipped file has to define phone parameters and uploads files when start at the first time when fone startup

then we can define personnalized params as default after reseting the fone

genreric CDA only some parms are define , the rest is by default , sound , menu items, application.....etc

here is an example

1- generic script nothing to do only define time format and wap link

```
<?xml version="1.0" encoding="utf-8"?>
<customization xmlns:scs="http://scs.sonyericsson.net/xsd/CDAGInput.xsd">

</customization>
```

any other implementation ???

added:

when you want to change icons and links and add some menus of wap and for u sites ses the contents *.itm files you can open them with winrar you will find the same name of .itm with xml extension , this files define the link of the site web used in your wap at this icon

you can replace it with another one extracted from another customization pack.
DESKTOP_HOOK_x.itm define icons on desktop wap navigator , and play now icons
FM_PICTURES_HOOK_x.itm define link for site donwloading images in menu pictures file manager of your fone
FM_SOUNDS_HOOK_x.itm define link for site donwloading sound and ringtone in menu music file manager of your fone
FM_THEMES_HOOK_x.itm for themes
FM_VIDEOS_HOOK_x.itm for video
MEDIA_PLAYER_HOOK_x.itm for media player
MESSAGES_HOOK_x.itm define in menu message new icon , for blog , or mms
MENU_HOOK_x.itm for define in wap menu items
ACTIVITY_MENU_HOOK_x.itm define links item in activity menu
x is a number

and u can see default.xml it contains all value by default when making reset master

```
<?xml version="1.0" encoding="iso-8859-1"?>
