Sony Ericsson Widget Manager **v2.1 !**
© mc_kibel, kaczmar22 (CentrumSE.pl/Forum)

Official Polish Topic about SE WidgetManager: http://centrumse.pl/...-tylko-download

We are presenting advanced widget manager for SE!
First of all: you don't need to know about tuning, to use this!
Supported phones: all SE Phones with Flash Lite 2.0 (and newer) and screen resolution 240x320.

-About SE-WM 2.0 (Sony Ericsson Widget Manager v2.0).
1. Supporting flash widgets - Up to 10 widgets on one screen, so you can have 20 widgets together!
2. Multi-screen option! **Shake phone to the left -> it loads first configuration, to the right -> loads second configuration, to the front -> loads third configuration, to the right -> loads fourth configuration!**
3. Ability to turn on/off widgets, when music is on.
4. Easy configuration via XML file - much optimized XML in v2.0!
5. You don't need to reboot phone to see changes - just set WidgetManager as wallpaper again.
6. Fully configurable widgets paths and names (needed for Multi-screen).
7. Separate wallpapers for different configurations.

-Installing SE-WM
1. Download WidgetManager 2.1.rar from attachment
2. Extract it. Copy whole WidgetManager 2.0 folder to pictures on phone.
3. Set WidgetManager.swf as wallpaper.
This pack (v2.1) has got included example config, which looks like that:
(First screen - config 1, second - config 2 etc)

[non-available image posted]

-Configuration SE-WM
XML file in v2.0 is changed - older configurations won't work with this version and new won't work with old. [Now it's released SEWM v2.1 - it works with .xml from 2.0 w/out problem :)]
1. Open config.xml from WidgetManager 2.0 folder.
2. You see:

```
<widgets>
        <main_settings>
                <multi_screen enable="true"/>
        </main_settings>
        <screen1 wallpaper="Screen1/Zanzibar.jpg">
                <widget1 wpath="Screen1/Winamp.swf" enable="true" xpos="0"
ypos="210" mdisable="false" menable="true"/>
```

```
                <widget2 wpath="Screen1/Analog.swf" enable="true" xpos="128"
ypos="25" mdisable="false" menable="false"/>
                <widget3 wpath="Screen1/PhoneStatus.swf" enable="true" xpos="0"
ypos="25" mdisable="false" menable="false"/>
        </screen1>
        <screen2 wallpaper="Screen2/Lake.jpg">
                <widget1 wpath="Screen2/HTCClock.swf" enable="true" xpos="4"
ypos="25" mdisable="false" menable="false"/>
                <widget2 wpath="Screen2/HTCPlayer.swf" enable="true" xpos="5"
ypos="190" mdisable="false" menable="true"/>
                <widget3 wpath="Screen2/Notes.swf" enable="true" xpos="0"
ypos="180" mdisable="true" menable="false"/>
        </screen2>
</widgets>
```

main_settings section:
You can enable/disable Multi-Screen option here - true or false. If it's false, configurations won't change after shake.
screen1 section:
-wpath: path to widget
-enable: enable/disable widget - true or false
-xpos: position from left edge of screen
-ypos: position from top edge of screen
-mdisable: disable widget, when music is on - true or false
-menable: show widget only, when music is on - true or false
-Want more widgets? Add next lines, like this:

```
<widget X wpath="folder/file.swf" enable="true" xpos="10" ypos="20"
mdisable="false" menable="false"/>
```

Instead of X put widget number [higher than previous position].
screen2, screen3, screen4 section:
-it's the same like screen1 section ^^

-Set path to wallpapers here: <screenX wallpaper="...."/>
-Recommended extension - jpg.
-Notes
- you can't set mdisable and menable to 'true' simultaneously.
It may be: false - false ; false - true ; true - false.
-It's recommended to remove operator logo and date/time in layout.

Widgets!

1. Analog (1)

Simple analog clock - Version small and big.
Autor: DemonicHawk

analog9.rar (38,13 KB)

10. Calendar

Autor: DemonicHawk
Edited by: kaczmar22
calendar.rar (54,62 KB)

11. HTC Clock + weather

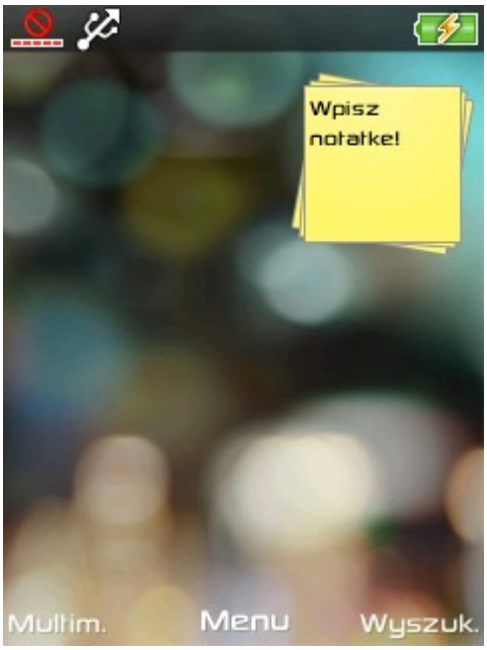

Autor: DemonicHawk
Edited by: mc_kibel, kaczmar22
Note: The widget does not connect to the Internet - weather.txt file updates manually, eg. Here:
http://www.joeearl.co.uk/portfolio/22/
HTC Clock.rar (260,34 KB)

12. Simple Analog

Autor: mc_kibel
SimpleAnalog.rar (12,66 KB)

13. Notes

Autor: mc_kibel
Note: File Note.txt WidgetManager thrown into the directory. The contents of this file are:
MyNote = Write the note

When you want to get rid of the notes, remove the message, but MyNote = leave (mandatory!).

Notes.rar (10,55 KB)

14. HTC Player

Autor: mc_kibel
Widget player that shows up when turned on music.
HTCplayer.rar (11,39 KB)

15. Winamp Widget

Autor: mc_kibel
Podobny widget do powyższego HTC Player
Winamp.rar (11,32 KB)

16. Windows Media Player

Autor: kaczmar22
Info: two versions: non-stop (shows up even when turned off the music) and normal
WMP.rar (31,38 KB)

17. Kalendarz - two versions, small and large

Autor: kaczmar22
Kalendarz.rar (21,51 KB)

Changelog:

Widget Manager 2.0: Complete update of the whole manager - a full description in the first post topic. Improved support for XML, large optimization, added Multi-Screen option.
WidgetManager_update1: Update only WidgetManager.swf. Much better service accelerometer!
