# All Java Applications/games Can be Used As Wallpaper on Sony Ericsson with JP-7

Started by centur, Sep 04 2007 08:02 AM

If you JAR file have not JAD , you make with JADMaker.zip :

Download: http://www.geocities...er/JADMaker.zip

Open folder :

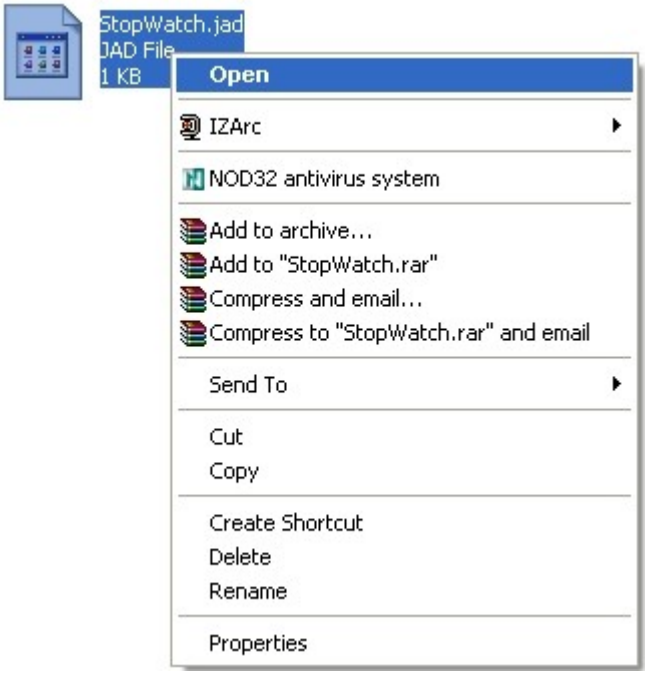

*[non-available image posted]*

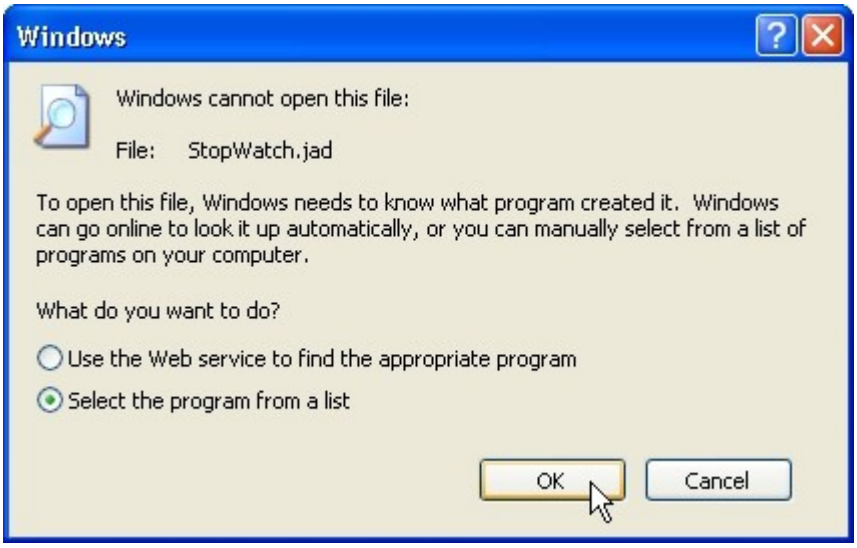

Drag and drop JAR file to this window

I make test with StopWatch.jar [RapidShare: 1-Click Webhosting]

Open JAD file with Notepad :

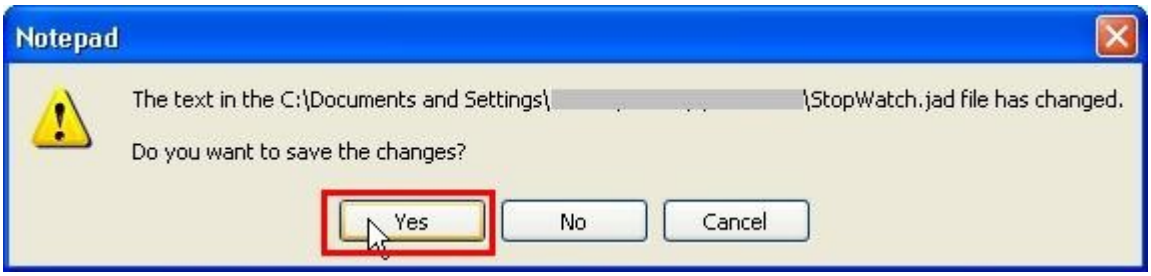

*[non-available image posted]*

Write: **SEMC-StandbyApplication: Y**

*[non-available image posted]*

Click Alt + F4 on JAD window and :

Put JAR + JAD in phone and install JAD file , but NO start application , only click **More** > **Wallpaper**
OR

**Menu** > **Settings** > **Display** > **Wallpaper** > **Application** > and choose application

Here is Clock with edited JAD file to use as Wallpaper ->
http://www.geocities...e/JAR/Clock.zip

---

JARs:

http://www.getjar.com

---

With your SE suite software, place both the JAR and JAD in PHONE MEMORY/Other
So it must be PHONE MEMORY, NOT memory stick! It doesn't work from memory stick
Now with your phone, go to file manager, browse to other, select the JAD file and use "install"
You will be good to go then ;)

Also just dragging the JAD in like you would do with a regular java jar will not work.

---

From far as i know u can't use all java applications as wallpaper.i have w760 and i can use only some java applications - i think in the java app must be some flash file.I can use walk mate,rock bobblehead.But i can't use a game like nfs pro street..even with both jad and jar files.I used walk mate as wallpaper without jad file.

---

you can easily set any java on your phone to wallpaper by using the "enable all setting in java" patch
after applied patch then point to your java > More > wallpaper
